

ARINC UrgentLinkTM

DISASTER COMMUNICATIONS NETWORK

**Rockwell

Building trust every day

High-reliability connectivity at your fingertips when it matters most

When your primary communications are down, ARINC UrgentLink leverages our proven Beyond-Line-of-Sight network.

The ARINC UrgentLink™ network is the first of its kind, a nationwide HF network utilizing spectrum specifically allotted for disasters.

With HF towers across the country and our highly trusted mission-critical operations centers, ARINC UrgentLink provides Beyond Line of Sight coverage that doesn't rely on communications infrastructure in the disaster zone.

ARINC UrgentLink is a public safety-grade, turnkey, managed network service that requires no capital or maintenance costs and significantly reduces training costs. With hundreds of frequencies, users can communicate with each other in the disaster zone and with anyone outside the affected area. Onsite radios link together to form a lifeline when telephone, cellular, dispatch and land mobile radio is unavailable.

To provide critical flexibility, our network enables users to communicate multiple ways. Whether it's a patch to a phone outside the disaster area, a user-to-user connection inside the disaster area, group calls among users, text messaging or radio system integration with other users, ARINC UrgentLink capabilities empower users with the connectivity to do what they do best.

Direct voice connection

Communicate with other users directly, within the disaster zone or with a radio outside of the affected area.

Radio patch

Users have one-touch access to the operations center to be patched to another ARINC UrgentLink customer radio.

Auto patch

Use the ARINC UrgentLink network to automatically connect to other users without an operator.

Phone patch

Users have 24/7/365 one-touch access to be patched to a phone through the ARINC UrgentLink operations center.

Radio system integration

User radios support a connection to local radio systems, and can be patched to any other user radio.

Group call

Communicate with a group of users within the disaster zone or with other users outside the affected area.

Text messaging

Exchange pre-defined or custom texts up to 90 characters, within the disaster zone or with radios outside the affected area.

Building trust every day.

Rockwell Collins delivers innovative aviation and high-integrity solutions that transform commercial and government customers' futures worldwide. Backed by a global network of service and support, we are deeply committed to putting our solutions to work for you, whenever and wherever you need us. In this way, working together, we build trust. Every day.
